OUR SERVICES

Benefits and Support

In Kalstein France, we take care of the full satisfaction of our customers, that is why we provide value-added services of the highest level based on our experience.

Online Inductions and Trainings

In any part of the world, receive your induction or training from our specialized team of engineers

Quick Response

Our work team is always available to response all your consults or questions, in order to support you in any situation.

#Letsgivemore ♥

Thanks to your purchase, a donation will be made to a non-profit foundation that fights against breast cancer and helps most vulnerable communities.

Technical Support

Enjoy of personalized advice for the correct preventive and corrective maintenance of your equipment, thanks to Kalstein's manuals and articles, special catalogues and video tutorials.

Delivery Logistics

We take care of all the necessary logistics for the dispatch of your goods, whether is by sea, land or air.

Kalstein Worldwide

With more than 25 years growing with our customers, Kalstein's multiformat and modern content, is now present in more than 10 countries and increasing.

Multivision binocular microscope Model YR0232 // YR0235

Product Description

Modular multi-view systems deliver exceptional image quality to every viewer thanks to their precision-coated glass optics. The accessory connects to a microscope and allows multiple users to view the same sample simultaneously for a real microscope feel. Standard systems are available for 2, 3, 4, 5, and 10 users, and customized systems with up to 20 viewing stations can be delivered according to customer specifications.

Characteristics

- ✓ The multi-view microscope allows the observation of people at the same time.
- ✓ With the features of an infinity optical system, effective illumination, LED pointer, and imaging
- ✓ Coherence, Its is widely used in clinics, scientific research, and teaching demonstrations.

microscopes

The microscope is an instrument that allows to observe objects that are not perceptible to the human eye. This is achieved through an optical system made up of lenses, which form and amplify the image of the object being observed.

One of the great advances that the world of science had occurred with the arrival of the Optical Microscope. This invention was the starting point for a wide variety of advances in the world of science, which started from the world of Microscopy and also changed the way of seeing the world, from the possibility of studying Bacteria (which gave march to Bacteriology) until the analysis of our own blood with the discovery of Red and White Blood Cells, which represented a strong advance in the world of medicine.
